

## **RESOURCES**

The REGREEN Residential Remodeling Guidelines© are a set of best practices available on the website in downloadable PDF format for convenient, off-line portability. The Guidelines dissect scope, integrated pre-design issues, and materials for typical residential renovations and provide environmental strategies to help you green your project. The interactive, web-based Strategy Generator offers a customized list of implementation measures appropriate to every design and construction phase. The website also provides a green product checklist, detailed home assessment form, and myriad of recommended sources for additional information.

## **CASE STUDIES**

Sometimes seeing is believing. The website features a growing number of residential renovation case studies from across the country that bring the REGREEN principles to life. Each green remodel includes details such as before/after photos, contract documents, project goals, site considerations, materials and resource efficiencies, and projected cost savings attributable to high-performance building strategies. Most importantly, each case study offers lessons learned from the process that can be applied to future projects.

## **EDUCATION**

REGREEN offers a range of online and in-person education that satisfies continuing education requirements for ASID members. As well, the REGREEN 301 workshop fulfills 7 GBCI

and .7 IDCEC continuing education credits. Self-paced, online courses cover kitchen and bath renovations, home performance audits, and deep energy retrofits, as well as basic building science issues such as moisture control and air movement. The in-person, instructor-led workshop synthesizes baseline knowledge from individual studies and applies REGREEN principles to real projects in an interactive, group dynamic.

### **Interested participants should consider these 3 pre-requisites before registering for the REGREEN 301 Workshop:**

- REGREEN: A Guide for REGREEN Remodeling Projects
- Basic Building Science: A Study of Air, Heat and Moisture Movement\*
- REGREEN 251: Home Performance Audits\*

Please e-mail a copy(ies) of your certificates of completion for each course along with the respective completion dates to [skainth@pegenv.com](mailto:skainth@pegenv.com).

*\*If you have a building science background, you may substitute HERS, CHEERS, or BPI certification for this class. Please submit a copy of your certification for verification.*

Training Provided By: PEG

REGREEN® is the nation's first comprehensive educational program focused on green residential remodeling. Co-developed by the American Society of Interior Designers (ASID) and U.S. Green Building Council (USGBC), REGREEN integrates a whole-house, systems-thinking approach while emphasizing team collaboration. Launched in 2008, the program is geared toward interior designers, architects, contractors, builders, manufacturers, project managers, and even consumers who want to renovate in an environmentally-respectful manner with a distinct focus on energy-efficiency and healthy interiors.

### **REGREEN Trained™ Certificate of Completion**

Interior designers and building professionals can differentiate themselves in the marketplace by becoming REGREEN Trained. Individuals who successfully complete the rigorous curriculum receive a Certificate of Completion and corresponding mark for use on business collateral.

REGREEN Trained certificate holders also receive online recognition on the REGREEN website, as well as [www.asid.org](http://www.asid.org) and [www.greenhomeguide.org](http://www.greenhomeguide.org).

Visit [www.REGREENprogram.org](http://www.REGREENprogram.org) and [www.PEGENV.com](http://www.PEGENV.com) or contact [REGREEN@asid.org](mailto:REGREEN@asid.org) or [skainth@pegenv.com](mailto:skainth@pegenv.com) for more information.
